

Who are we?

The anesthesia clinician (anesthesiologist, certified registered nurse anesthetist) for your upcoming surgery/procedure will be provided by Envision Physician Services. We work with your provider in your care.

What is anesthesia?

Anesthesia involves managing your comfort throughout your surgery/procedure by helping control sleep and pain. The type you receive (general, regional, or monitored anesthesia care) will be determined by your anesthesia clinician.

What to expect from anesthesia

Before

Your anesthesia clinician will ask you to stop eating and drinking before your surgery. Be sure to follow these instructions to avoid rescheduling.

After

You will be instructed not to consume alcohol or drive immediately after surgery, and to drink plenty of fluids and rest. You will also be contacted to complete a survey about your experience.

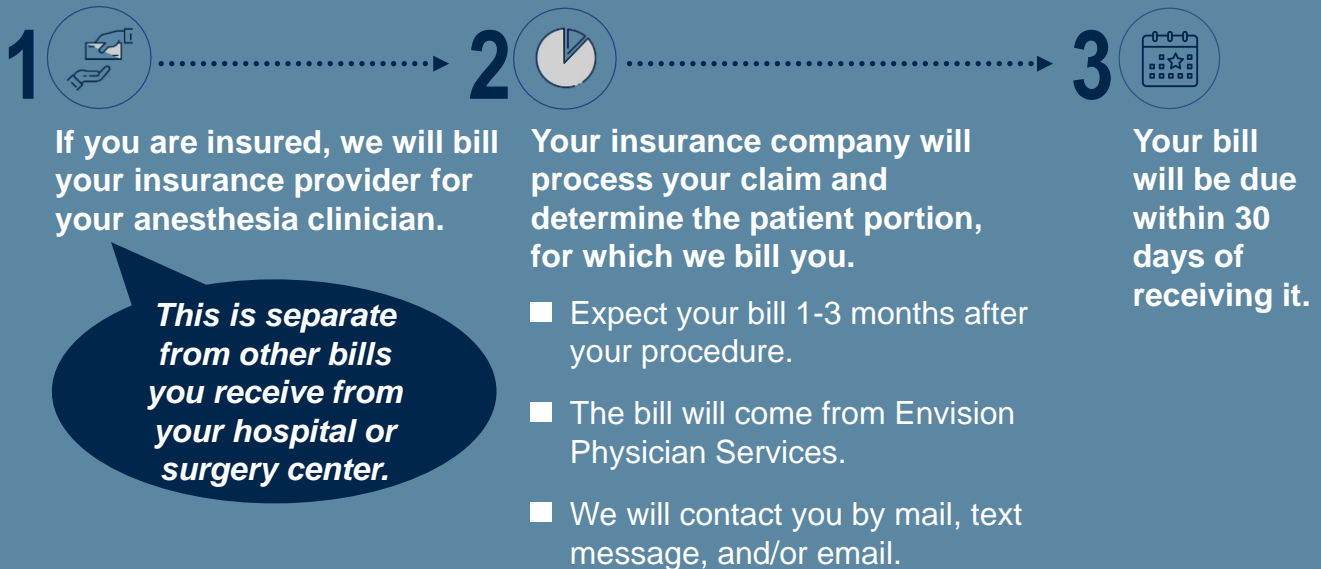

Side effects

Side effects may include difficulty concentrating, or feeling groggy or nauseous. Your anesthesia clinician will advise on administration of pain medication after your surgery, some of which have their own side effects.

More details will be provided before and after your operation.

Billing

Unless you pre-paid or your procedure is fully covered by your insurance, you will be billed:
